Q2. cssdemo.html:

```
<!DOCTYPE html>
<html>
    <head>
        <title> CSS Demo </title>

        <style>
            body { background-color: lightpink; }
            div {
                color: blue;
                border: 4px solid blue;
                box-shadow: 2px 3px 10px gray;
                padding: 10 px;
            }
        </style>

        <link rel="stylesheet" href="externalstyles.css">
    </head>
    <body>
        <div>
            <p> This paragraph inherits text color from div.
            </p>
            <p style="color: darkgreen;">
                This paragraph uses inline CSS.
            </p>
        </div>
    </body>
</html>
```

externalstyles.css:

```
p {
    font-size: 10 px;
}
```

Explanation:

Inline CSS overrides embedded and external CSS by the cascading rules.
Paragraph inherits text color from div element by the inheritance property.

This paragraph inherits text color from div.

This paragraph uses inline CSS.

Q3. Git (Version Control System): A local tool that tracks the history of your files. It allows you to "save" snapshots of your projects so you can revert to previous versions if something breaks.

GitHub (Hosting Service): A platform that hosts Git repositories in the cloud. It provides a UI for code reviews, project management, and collaboration features like Pull Requests.

Workflow:

git init: Initializes a new local Git repository in your project folder.

git clone: Downloads an existing project from GitHub to your computer.

git branch <name>: Creates a new isolated environment to work on a specific feature.

git add. : Moves your changes from the working directory to the Staging Area.

git commit -m "msg": Records a snapshot of your staged changes in the Local Repository.

git push origin <branch>: Uploads your local commits to the remote repository on GitHub.

Pull Request (PR): A request on GitHub to merge your branch's code into the main project.

Sundaram

FOR EDUCATIONAL USE

Code Review: Others inspect your PR, leave comments and approve the changes.

Merge: The final step where your approved code is officially added to the main codebase.

git pull: Fetches and integrates the latest changes from GitHub back to your local machine.
